logarithmic scale mentioned above.

### **How Much Amplifier Power Do You Really Need?**

Nowadays you can find switch-mode power supplies, which considerably reduce format and weight problems. I use one myself and I love being able to slide my 400 watt amp into my bass gig bag. It's not rare, nowadays, to see miniaturized versions with quality bass sounds, using class D amps. So jump in. They're made for basses!

### **What to look for in order to choose the right bass amp ...**

The 20-watt amp is double the power of the 10-watt amp, but doubling the power only translates to an increase of 3 dB SPL. Remember, in order to sound "twice as loud," you need an increase of 10dB, so while a 20W amplifier will sound noticeably louder than a 10W amp, it will not sound twice as loud.

### **Understanding Wattage, Speaker Efficiency, and Amplifier ...**

Step7: Calculate the maximum wattage. To select an amplifier with a proper RMS output wattage for your subwoofers, you must determine what the maximum output that your subwoofer can take is. If it is a 400-watt subwoofer, then your amplifier should be above that limit. If you have a 1000-watt subwoofer, then you must have an 1100 or a 1200-watt ...

### **How to Figure Watts on Car Amplifier? Step-by-step Guide**

Power output and speaker volume follow a logarithmic, not linear, relationship. For example, an amplifier with 100 W per channel will not play twice as loud as an amplifier with 50 W per channel using the same speakers. In such a situation, the actual difference in maximum loudness would be just slightly louder; the change is only 3 dB.
