**The Books - coding club - learn to program well**  
Remember that expressions are just values combined with operators, and they always evaluate down to a single value. A data type is a category for values, and every value belongs to exactly one data type. The most common data types in Python are listed in Table 1-2.The values -2 and 30, for example, are said to be integer values. The integer (or int) data type indicates values that are whole ...
