Graduate Classical Mechanics. Lecture Notes by Michael Fowler, UVA.. Fall 2015. Text: Mechanics, Landau and Lifshitz. This is a very short book, but there's no padding. The reviewer on the back of the newer edition (no doubt an expert in the field) states admiringly that "there is not a superfluous sentence" in this "masterpiece".

When applied to the case at hand, all four of these yield the same condition, namely $1/\mu = -\gamma^2 v$ For $\mu = v = 1$, which is the case Goldstein gives, these conditions are clearly 1 we see that not satisfied, so (1) is not canonical. But putting $\mu = 1$, $v = -\gamma^2$ equations (1) are canonical.

If we start at Goldstein's equation, again, only this time recognize $b = 0$ due to symmetry from the start, the solution actually follows more quickly. $x = a \cosh y$ $a \cdot xy = \cosh a \cdot x$ Using, the dimensional quantities defined in the problem, $x^2 = a^2$
