Re: IPTables manual. If you're going to run CentOS you might as well embrace the "Upstream Provider" / CentOS way of doing iptables, which is to have the /etc/sysconfig/iptables file set up properly and rely on "service iptables stop/start" to manage it. The easiest way would be to first clear out any existing rules with "service iptables stop".

IPTables manual - CentOS

How to configure IPTables to open Ports in CentOS / RHEL. By admin. Most Linux distributions will default to running a host-based firewall, iptables. If you want your hosts to communicate with each other, you have two options: turn off iptables or configure iptables to allow communication. I prefer to leave iptables turned on and configure access.

iptables(8) - Linux man page

Introduction. Like most other Linux distributions, CentOS 7 uses the netfilter framework inside the Linux kernel in order to access packets that flow through the network stack. This provides the necessary interface to inspect and manipulate packets in order to implement a firewall system. Most distributions use the iptables firewall, which uses the netfilter hooks to enforce firewall rules.
