### Manning | Type-Driven Development with Idris

Idris: A Language for Type-Driven Development. Idris is a programming language designed to encourage Type-Driven Development. In type-driven development, types are tools for constructing programs. We treat the type as the plan for a program, and use the compiler and type checker as our assistant, guiding us to a complete program that satisfies the type. The more expressive the type is that we give up front, the more confidence we can have that the resulting program will be correct.

### Idris: A Language for Type-Driven Development

Type-Driven Development with Idris is about making types work for you. Types are often seen as a tool for checking for errors, with the programmer writing a complete program first and using the type checker to detect errors.

### Type Driven Development in Idris

Edwin Brady is the creator of the Idris programming language and author of the book Type-Driven Development with Idris and a computer science lecturer. The book, the language, and Edwin himself all seem to be chock full of ideas for improving the way computer programming is done by applying ideas from programming language theory.

### Type Driven Development and Idris With Edwin Brady ...

Type-Driven Development with Idris introduces a software development approach that uses types as the primary tool for building softwares. In this paradigm, types are given much more responsibilities than their traditional role of checking data validity.

### Type-Driven Development with Idris - Review

Idris is defined as a "general purpose, purely functional programming language with dependent types. It is Haskell-like language (with touches of ML, Rust, Coq, and Agda) and compiles to C. Type-driven development emphasizes types as the foundation of your code.

One of the best aspects of Idris is type-driven development. The essential idea is that when writing your functions, you start from the types, which you gradually refine, and you have the compiler fill in as much code as possible on your behalf. Writing Idris should ideally be an interactive process of talking to the compiler:
