The temperature door diverts air over the evaporator for cool air or points the flow over the heater core for warm air. The blend door diverts the airflow to the defroster vents in the upper dashboard, the floor discharge for heat or the center vents for air conditioning. Carmakers have used this basic design for 100 years.

Chevelle Original Equipment Condensers are heat exchangers typically located in front of the engine radiator and are GM-recommended replacements for your vehicle's original components. The condenser dissipates heat absorbed by the refrigerant from the evaporator and from the compressor to the outside air. Hot refrigerant gas passes through tubes, where heat is removed, causing it to turn ...
