Introduction to Correlation and Regression Analysis In this section we will first discuss correlation analysis, which is used to quantify the association between two continuous variables (e.g., between an independent and a dependent variable or between two independent variables).

Download File PDF Correlation And Regression Analysis

Introduction to Correlation and Regression Analysis

Correlation is described as the analysis which lets us know the association or the absence of the relationship between two variables 'x' and 'y'. On the other end, Regression analysis, predicts the value of the dependent variable based on the known value of the independent

Correlation and Regression: A Comparative Study

Recall that both correlation and regression measure the relationship between two variables. Correlation comes first and simply quantifies the relationship or co-movements between variables. Next, if the researcher assumes that changes in one variable
