Linux is a powerful and diverse operating system, so naturally the screenshot tools for the platform are just as powerful and diverse. The wide variety of these screenshot tools range from simple and easy-to-use to powerful command-line tools that offer the ability to script and automate the process.

**How to Take a Screenshot on Linux**

My own personal favorite is Gnome Screenshot. Typically I use Linux on a desktop or laptop and the training materials even those on those that feature the command line can be easily captured by Gnome Screenshot. I like it because it provides some options that make later use of those screen grabs easy to use.
